

Safran Landing Systems – Approval

Changes have been made to the *Safran Landing Systems* (SLS) system for approved suppliers.

SLS no longer issue certificated approvals to stockholders but it is a condition that they meet the quality requirements of SREQ-SLS-000001.

SLS require that Built-to-Print suppliers who use their own approved stockholders must be certified to AS9120 quality management system¹.

Columbia Metals is a fully certified AS9120² stockholder and meets the quality requirements of SREQ-SLS-000001 for *SLS* Built-to-Print approved suppliers.

It is a requirement that Columbia Metals be on an approved suppliers list for any Built-to-Print supplier purchasing material pursuant of an *SLS* order.

A handwritten signature in black ink, appearing to read 'RGT', is positioned above the typed name.
